PERFORMANCE WORK STATEMENT (PWS)

Project: *IT Support Services for Naval Health Clinic Charleston*
Navy Medicine Readiness and Training Command - Charleston

GENERAL INFORMATION

1.0 Scope of Work:

The contractor will configure and install telecommunications and computer workstation hardware and software, provide computer room technical support, perform hardware and software training and maintain the necessary computer hardware and telecommunications equipment, data quality analysis for our command, network security for our command, and inventory/budget for IM equipment. The hardware must be installed and readily integrated into the local area network (LAN) and the wide area network (WAN). The purpose is to posture the infrastructure of hardware and telecommunications equipment to ensure the total success of DOD and installed medical information systems. Current workload provides customer support for over 460 users. The contractor shall perform the work at the Naval Health Clinic Charleston and our Dental Clinic, Goose Creek, South Carolina. These clinics are both Department of Defense and Veteran Affairs medical treatment facilities. The NHCC is a geographically separated unit with networking ties to Naval Hospital Beaufort. The contractor will not be asked to travel to Naval Hospital Beaufort. A contractor C-level representative will be scheduled to visit on a quarterly basis to meet with the NHCC Commanding Officer, Executive Officer, Command Master Chief, Program Manager, and all members of the IT production team. The purpose of the corporate visit with the NHCC command is to provide a current status of the IT operating environment and to address innovations, economies of scale, and efficiencies that can be implemented to improve IT operations. The visit will also provide a forum to discuss potential problems and technical issues as well as solutions in rolling out new programs and technology infrastructure. A summary report of these senior executive engagements will be published to provide lessons learned, future roadmaps, and procedure enhancements for the NHCC command to review and consider for future implementation.

2.0 Background:

Naval Health Clinic Charleston provides medical care to active duty, retired, and dependents of all branches of military service. It is a fully accredited and certified clinic using the latest in computer related diagnostic and reporting techniques. The Information Management Department (IMD) consists of two divisions and is responsible for all aspects of automated information management within the Naval Health Clinic Charleston and our outlying clinics. Responsibilities include installing, repairing, and disposing of hardware ranging from centrally operated VM Servers, local servers to desktop computers, printers and associated components. In addition, the manning of the helpdesk, servers, LAN/WAN, telecommunications, client, and server hardware, and program management for all activities to support over 385 users for CHCS/AHLTA and 460 for Outlook is paramount. Services include server configurations and management to include network, security, user accounts, account policies, secure backups and storage solutions, Windows and Windows Server (latest Defense Health Agency [DHA] supported versions) operating system maintenance, Defense Enterprise Email, SCCM, Veritas Backup Exec, Microsoft SQL, McAfee Security Suite software, Microsoft Office Suite of products, specialized site specific applications. Hardware support is provided for all workstations/laptops, servers, printers, video terminals, kiosk, routers, switches, and telecommunications equipment. The Government will provide a data recovery plan which includes a backup and storage solution with regular audit and contingency plans.

Additionally, commercial off-the-shelf (COTS) software is procured by the Government and installed and updated by the contractor. The contractor shall support unique systems such as the Composite Healthcare Computer System (CHCS) and Armed Forces Longitudinal Health Technology Application (AHLTA). The contractor shall support all requests for video teleconferencing.

CONTRACTOR REQUIREMENTS

3.0 Technical Requirements/Tasks:

3.1 Task 1 - Hardware/Software/Application Maintenance Services

The contractor shall provide support to set up, troubleshoot, repair and maintain computer workstations, and associated peripheral hardware. The standard software packages consist of a Microsoft Windows operating system with Microsoft Office Professional. The contractor shall support all system core images made available by DHA using Microsoft System Center Configuration Manager (SCCM) to deploy, manage, update, and repair workstation/laptop/server images. The contractor shall support NHCC's virtualization initiatives by establishing a virtual infrastructure by developing and testing virtual workstations and servers and applications in support of the virtual systems. The contractor shall install/replace workstations/laptops and associated hardware as needed. The contractor shall keep a log of daily activities for this task, which will be available upon request, and summarized in the monthly status report. The contractor shall provide graphics assistance in support of the command and the Public Affairs Officer. The contractor shall manage/support CHCS/AHLTA, DMLSS, SAMS, Outlook, CDA, DMHRSi, AUDIOCARE, MICROLOG, and VMWARE. Defense Enterprise Email account creation shall also be performed by the contractor as well as iPhone email accounts for designated individuals. These accounts shall be maintained and periodically reviewed for accuracy. The contractor shall provide SOPs, hardware and software upgrades, and user assistance. Command intranet services are provided by the contractor in association with Naval Information Warfare Center (NIWC) personnel with static and dynamic web site development included. The contractor shall manage video teleconferencing equipment and provide support for video teleconferencing requests.

3.2 Task 2 - Help Desk Operational Support

The contractor shall maintain a help desk to provide user support via desk side, telephone, or remotely. A trouble ticket will be properly initiated in order to document all repair requests from beginning to completion. The contractor shall be responsible for the deployment, relocation, and removal of all hardware and peripherals under the cognizance of the information management department; that contractor shall install, once approved, any additional software packages outside the scope of the standard software package. Additionally, the contractor shall maintain trouble tickets from the DHA Remedy Helpdesk and the Command's intranet home page via Outlook. The contractor shall keep a log of daily activities for this task, which will be available upon request, and summarized in the monthly status report. The contractor shall also provide operational support to the NHCC Dental Clinic and VA Optometry to include system installation, testing, deployment, software support, telecommunications, and dental imaging assistance. The contractor shall provide on-site support of the networked systems.

3.3 Task 3 - LAN Maintenance and Telecommunications Support

The contractor shall install the necessary software and hardware to connect workstations devices on the local area network. The contractor shall analyze and correct telecommunication problems with assistance from Naval Health Clinic Charleston (NHCC).The contractor shall assist in the

establishment and/or maintenance of the NHCC Configuration Management Program to include IP addressing, hardware interfaces, telecommunication line identification. Hardware will be furnished by NHC Charleston and DoD/DHA. The contractor shall send the devices out for repair with authorization from the CIO. The contractor shall provide documentation describing procedures used to successfully set up and connect hardware to the NHCC LAN. Terminal server devices are deployed and supported at the clinic and all clinics for CHCS devices and instruments. The contractor shall provide detailed documentation of network configurations for the server room, LAN and WAN infrastructure, and network backbone are provided with Microsoft Visio. The contractor shall keep a log of daily activities for this task, which will be available upon request, and summarized in the monthly status report.

3.4 Task 4 - Health Information and Data Collection

The contractor is responsible for the implementation of new databases and or software for support and reporting of Naval Health Clinic's healthcare services data quality services, initiatives, projects, reports and other activities based on regulatory and accreditation mandates. The contractor shall analyze and coordinate data collection for Performance Improvement, Quality Improvement, Utilization Management, Comptroller and other internal and external sources. The contractor shall assist with complex and special projects as well as implement new databases and/or software for support and projects. The contractor shall coordinate this with Navy Medicine East/NHCC medical and dental clinics for these projects and databases, be responsible for the quality in the data domain within these databases and projects as well as define reports and key metrics on the data to NHCC. The contractor shall manage team quality and identify leads, and manage and execute efforts to maintain data integrity. The contractor shall coordinate between various data entities and the site to produce a quality data source. The contractor shall work with site staff and project leaders to ensure the data analyzed is correctly. The contractor shall identify data quality in the current systems, define metrics on data, create reports on the current quality of the data, and act as a consultant to project administrators to ensure data integrity. The contractor shall lead team efforts in the data quality acquisition for site data quality. The contractor shall work with the comptroller in the dispensing of reports and software tools necessary in a collaborative effort to support the command. The contractor shall act as the informational representative for Health Insurance Portability and Accountability Act, WAM coordination with comptroller, and CHCS data collection personnel. The contractor shall provide support for system analysis and provide support for the Ambulatory Data Module ADM, Ambulatory Data System ADS and KG-ADS. The contractor shall provide analysis for the Workload Assignment Module (WAM) and Microsoft Outlook. The contractor shall analyze user requirements, procedures and problems to automate processing and improve existing systems. The contractor shall diagnose and analyze system faults and conduct software analysis. The contractor shall monitor the various performance tools needed for meeting the system requirements. The contractor shall participate in a variety of command high level working groups and committees and create and program custom ADM business objects reports to assist staff members in making data driven decisions. The contractor shall create, modify and delete users' accounts, and provide system upgrades and maintenance updates. The contractor shall participate in the Population Health initiative for analyzing data and providing repots. The contractor shall provide medical data analysis and process trouble shooting. NHC Charleston assists the clinics in looking at the data from medical applications and determining where process flaws or gaps exist in current procedures and business practices. The contractor shall perform and report quantitative analysis to Command leadership on a weekly basis. The contractor shall continually maintain HIPAA security. The contractor also will adjust NHC Charleston security posture as necessary to meet Navy and Federal guidelines in regards to HIPAA compliance. A Command report card is provided by the contractor to the Directors, Executive Officer and Commanding Officer that shows the provider workload and patient statistics per clinic and provider. This helps the Command make business decisions for the clinical areas. The contractor is responsible for the implementation of new

databases and/or software for support and reporting of Naval Health Clinic Charleston's healthcare services data quality services, initiatives, projects, reports and other activities based on regulatory and accreditation mandates.

3.5 Task 5 - System Security

The contractor shall provide system security for all servers, workstations, laptops, and tablets. The contractor shall regularly perform periodic network scans for viruses and software vulnerabilities. Enterprise anti-virus solution is provided by the Government. The contractor shall ensure that all users have completed the necessary Information Assurance training prior to authorizing network and system access. The contractor shall be responsible for all upward reporting for NHC Charleston's security posture to the Defense Health Agency. The contractor shall provide network configuration and support to provide for all server and client workstations/laptops running Windows and Windows Server operating system. The contractor shall provide management of the Command's remote access VPN solutions communications equipment. The contractor shall maintain and support secure remote access solutions for users who are TAD or deployed. The contractor shall provide management of all network user/computer accounts and groups as well as creation of accounts and groups. The contractor shall provide server support for configuration, management, and documentation of all application and storage servers. The contractor shall provide support for network data storage. A detailed backup and recovery solution is provided for each server and regular audits are performed to verify backup integrity. The Veritas Backup Exec application is used in conjunction with Dell PowerVault tape library solutions to backup all server data. The contractor shall document all backup and recovery procedures and tape storage policies. The contractor shall provide detailed documentation of the server room contents and infrastructure components.

3.6 Task 6 - Administrative Support

The contractor shall provide technical support to include data entry, management and automation support. The contractor shall ensure the integrity of local databases that keep track of daily activities and provide for the long-term support of office operations. The contractor shall obtain, review, search and extract data from existing records, create cumulative, statistical, tabular, technical, narrative and graphic reports and documents.

3.7 Task 7 - Inventory Management

The contractor shall establish a local inventory database to properly account for Naval Health Clinic Charleston and Defense Health Agency end user devices and hardware. The contractor shall assist in accessing disestablished of obsolete hardware from the Clinic inventory per DHA guidelines. The contractor shall maintain an inventory database/report for this task, which will be available upon request, and summarized in the monthly status report.

3.0 Government Furnished:

a. Access to relevant maintenance documentation
b. Access to IMD personnel for peer guidance
c. Access to users for troubleshooting history
d. Spare equipment and spare parts
e. Computer
f. Desk, chair and office supplies
g. Laptops for remote access during emergency situations (weather, medical)

5.0 Deliverables / Schedule:

In fulfillment of this effort, the Contractor shall deliver directly to the customer:
(1) Briefings, reports and working papers as described in the previous systems documentation will include both user, non-technical, operations instruction and technically oriented, modification and maintenance directions.
(2) Monthly progress reports containing:
a. A description of the prior month's progress
b. A summary of estimated expenses for contractor travel, training, etc., which are not included in the total amount of this Delivery Order.
c. A review of problems encountered that may affect the completion of this effort
d. Acceptance of the deliverables will be the responsibility of the Technical Liaison.
(3) Program Management monthly status reports
(4) Hardware/Software maintenance log
(5) Help Desk log
(6) Inventory database
(7) LAN Maintenance and Telecommunications log
(8) Training document
(9) Computer Operations Support daily log

6.0 Travel:

(1) Area of Travel. Performance under this contract may require travel by contractor personnel. If travel, domestic or overseas, is required, the contractor is responsible for making all needed arrangements for his personnel. This includes but is not limited to the following:

Medical Examinations
Immunization
Passports, visas, etc.
Security Clearances

All contractor personnel required to perform work on any U.S. Navy vessel will have to obtain boarding authorization from the Commanding Officer of the vessel prior to boarding.

(2) Travel Policy. The Government will reimburse the contractor for allowable travel costs incurred by the contractor in performance of the contract and determined to be in accordance with FAR subpart 31.2, subject to the following provisions:

Travel required for tasks assigned under this contract shall be governed in accordance with rules set forth for temporary duty travel in FAR 31.205-46.

(3) Travel. Travel, subsistence, and associated labor charges for travel time are authorized, whenever a task assignment requires work to be accomplished at a temporary alternate worksite.

Travel performed for personal convenience and daily travel to and from work at contractor's facility will not be reimbursed.

(4) Per Diem. Per Diem for travel on work assigned under this contract will be reimbursed to employees consistent with company policy, but not to exceed the amount authorized in the Department of Defense Joint Travel Regulations.

(5) Shipboard Stays. Whenever work assignments require temporary duty aboard a Government ship, the contractor will be reimbursed at the per diem rates identified in paragraphs C8101.2C or C81181.3B (6) of the DOD Joint Travel Regulations, Volume 2.

(6) Air/Rail Travel. In rendering the services, the contractor shall be reimbursed for the actual costs of transportation incurred by its personnel not to exceed the cost of tourist class rail, or plane fare, to the extent that such transportation is necessary for the performance of the services hereunder and is authorized by the Ordering Officer. Such authorization by the Ordering Officer shall be indicated in the order or in some other suitable written form.

NOTE: To the maximum extent practicable without the impairment of the effectiveness of the mission, transportation shall be tourist class. In the event that only first class travel is available, it will be allowed, provided justification therefore is fully documented and warranted.

7.0 Contractor's Key Personnel:

Help Desk Lead – 1 ea. FTE

Has overall responsibility for help desk operations associated with the identification, prioritization and resolution of reported problems. Ensures that all phases of help desk support are properly coordinated, monitored, logged, tracked and resolved appropriately. May maintain responsibility for development, maintenance and integrity of help desk software.

Help Desk Operator – 3 ea. FTE

Under general supervision, responds to and diagnoses problems through discussions with users. Includes problem recognition, research, isolation, and resolution steps. Typically is able to resolve less complex problems immediately, while more complex problems are assigned to senior level support. May involve use of problem management database and help desk systems.

Senior Systems Administrator – 1 ea. FTE

Under general supervision, responsible for installing, configuring, and maintaining operating system workstations and servers, including web servers, in support of business processing requirements. Performs software installations and upgrades to operating systems and layered software packages. Schedules installations and upgrades and maintains them in accordance with established IT policies and procedures. Monitors and tunes the system to achieve optimum performance levels. Ensures workstation/server data integrity by evaluating, implementing, and managing appropriate software and hardware solutions. Ensures data/media recoverability by implementing a schedule of system backups and database archive operations. Supports media management through internal methods and procedures or through offsite storage and retrieval services. Develops and promotes standard operating procedures. Conducts routine hardware and software audits of workstations and servers to ensure compliance with established standards, policies, and configuration guidelines. Develops and maintains a comprehensive operating system hardware and software configuration database/library of all supporting documentation. Provides technical knowledge and analysis of highly specialized applications and operational environment, high-level functional systems analysis, design, integration, documentation, and implementation advice on exceptionally complex problems that necessitate high-level knowledge of the subject matter for effective implementation. Participates as needed in all phases of software development with emphasis on the planning, analysis, modeling, simulation, testing, integration, documentation and presentation phases.

Systems Administrator – 4 ea. FTE

Under general direction, responsible for activities related to system administration. Assigns personnel to various projects, directs their activities, and evaluates their work. Ensures long-term requirements of systems operations and administration are included in the overall information systems planning of the organization. Responsible for the installation, maintenance, configuration, and integrity of computer software. Implements operating system enhancements that will improve the reliability and performance of the system.

Information Assurance Network Security Specialist – 1 ea. FTE

Analyzes general information assurance-related technical problems and provides basic engineering and technical support in solving these problems. Designs, develops, engineers, and implements solutions that meet network security requirements. Performs vulnerability/risk analyses of computer systems and applications during all phases of the system development life cycle.

Data Quality Specialist – 1 ea. FTE

Under general direction, carries out procedures to ensure that all information systems, products and services meet organization standards and end-user requirements. Performs and leads tests of software to ensure proper operation and freedom from defects. May create test data for applications. Documents and works to resolve all complex problems. Reports progress on problem resolution to management. Devises improvements to current procedures and develops models of possible future configurations. Acts as information resource about assigned areas to technical writers and other Quality Assurance Analysts. Performs complex workflow analysis and recommends quality improvements. Frequently reports to a Quality Assurance Manager.

Administrator/Technical Typist – 1 ea. FTE

Provides administrative assistance to ensure efficient operation of the office. Ensure successful tracking of training and supports organizational transitions. Open and distribute incoming regular and other materials and co-ordinate the flow of information internally and with other departments and organizations. Track time off and time keeping systems entries, work with incoming personnel to check into the organization. Also maintain phone rosters, recall bills, and distribution lists. Serve as department training coordinator: attend meetings, maintain electronic record of all training. Assist staff with instructions on how to find and complete training. Reviewing training records every month to ensure everyone has completed the monthly training.

Property/Inventory Manager – 1 ea. FTE

Provides guidance and training on matters relating to property management as well as ensure timely receipt of all inventory acquisitions, maintenance, documentation, movement and identification of storage property. Works closely t to deploy, redeploy and recoup hardware (CPU's, Monitors, Printers, Scanners, and Fax Machines). Implements Life Cycle Management ensuring the reutilization of property is in place and ordered when needed. Setup, maintain and manage storage spaces for hardware, provide logistics for storage and retrieval, and oversees movement of large amounts of equipment entering and leaving the facility. Assists with budget and guidelines to order equipment, perform contract administration on delivery orders as well as purchase orders.

Program Manager – 1 ea. FTE

Responsible for all aspects of the development and implementation of assigned projects and provides a single point of contact for those projects. Takes projects from original concept through

final implementation. Interfaces with all areas affected by the project including end users, computer services, and client services. Defines project scope and objectives. Develops detailed work plans, schedules, project estimates, resource plans, and status reports. Conducts project meetings and is responsible for project tracking and analysis. Ensures adherence to quality standards and reviews project deliverables. Manages the integration of vendor tasks and tracks and reviews vendor deliverables. Provides technical and analytical guidance to project team. Recommends and takes action to direct the analysis and solutions of problems.

8.0 Security Requirements:

The contractor shall recognize the importance of a successful start-up of contract services and the timely recruitment of qualified personnel to meet all contract requirements. The contractor shall complete all steps necessary to assist each contract employee performing services at the Naval Health Clinic Charleston to obtain documentation required for access to the MTF. All contractors will be required to obtain a SECRET clearance.

9.0 Data Rights:

The Government has unlimited rights to all documents/material produced under this contract. All documents and materials, to include the source codes of any software, produced under this contract shall be Government owned and are the property of the Government with all rights and privileges of ownership/copyright belonging exclusively to the Government. These documents and materials may not be used or sold by the Contractor without written permission from the Contracting Officer. All materials supplied to the Government shall be the sole property of the Government and may not be used for any other purpose. This right does not abrogate any other Government rights.

10.0 Period of Performance:

The period of performance for this effort is 01 April 2021 through 31 March 2022 with four (4) one-year options.

01 April 2022 through 31 March 2023
01 April 2023 through 31 March 2024
01 April 2024 through 31 March 2025
01 April 2025 through 31 March 2026

11.0 Place and Hours of Performance:

Work will be performed on-site at the Naval Health Clinic Charleston and Dental Clinic. NHC Charleston hours of operation are 0600 and 1830, Monday through Friday.

12.0 Quality Assurance Surveillance Plan (QASP):

The Government intends to utilize a Quality Assurance Surveillance Plan (QASP) to monitor the quality of the Contractor's performance. The oversight provided for in the order and in the QASP will help to ensure that service levels reach and maintain the required levels throughout the contract term. Further, the QASP provides the COR with a proactive way to avoid unacceptable or deficient performance, and provides verifiable input for the required Past Performance Information Assessments. The QASP will be finalized immediately following award and a copy provided to the Contractor after award. The QASP is a living document and may be updated by the Government as necessary.

PERFORMANCE OUTCOMES	ACCEPTABLE PERFORMANCE LEVEL	MONITORING METHOD
1. Trouble call answered within 3 days	85%	Written Quarterly Report
2. Software Security Checks	95%	Written Quarterly Report
3. Administrative/Time Entry	95%	Written Quarterly Report
4. Inventory of IT Assets	95%	Written Quarterly Report

12.1 QASP Methodology

Input: The building blocks for assessing and planning, which include client feedback and expectations, quality monitoring, project plans, audit and defect reports, lessons learned, and corporate quality standards.

Quality Control Processes and Practices: Metrics, the quantitative measurement of performance and quality and includes the numbers of defects/deficiencies, corrective actions, time to close action items, and service level performance; and analysis, the examination of metrics against quality baseline standards through the use of analysis and application of quality methodologies to assure continuous improvement in delivering quality services.

Outputs: Documentation and reports describing quality assurance, quality improvement, and performance, including evaluations, audit reports, defect reports, lessons learned, root-cause analysis reports, corrective action recommendations, and other results.

12.2 Roles and Responsibilities

Quality Control responsibilities for the contract members are:

Team Members:

- Ensure daily production meets the stated objectives for quantity and quality.
- Expect that his/her work will be monitored. Unsatisfactory contribution will be noted and remedial training will be provided.
- Consistently and accurately report daily production numbers via contractor Task unique data bases and spreadsheets.

Team Leads:

- Ensure that team members have been appropriately trained and understand the standard processing procedures.
- Ensure that team members understand the requirements of the assigned function, including production volumes, accuracy, and timeliness.
- Ensure that each team member is properly trained on the software tools

required to complete each phase of an assigned task.

- Perform Quality Assurance inspections as stated in the Quality Assurance Surveillance Plan (QASP) to ensure that quality standards are maintained. Complete the required inspection forms, summary sheets and ensure that all reports are given to the Team Supervisors in a timely manner.
- Inform team members of changes to the business rules or internal processing procedures and follow up in a timely manner to ensure compliance.

Task Supervisors:

- Review the required inspection forms, summary sheets and ensure that completed accurate reports are given to the Quality Control Supervisors in a timely manner.
- Inform Team Leads of changes to the internal processing procedures.
- Perform random Quality Control inspections as stated in the Quality Control Management Plan to ensure that quality standards are maintained by the Team Leads.

Quality Control Team:

- Conduct Quality Assurance inspections and monitor Team Lead Quality Control Inspections.
- Develop required tools for data collection, reporting, trending and other special analysis.
- Develop and maintain tools to assist team members in performing Quality Control procedures.
- Produce periodic "scoring" of individual team member performance.

Quality Control Supervisor:

- Implement the Quality Control Management Plan (QCMP)
- Evaluate Quality Control procedures and perform improvements as appropriate.
- Provide feedback to the Quality Control Program Manager on overallperformance.
- Provide the Supervisor & Team Leads with the various reports that can be used to monitor the Quality Control program and team performance.

Quality Control Program Manager

- Provide/Present COTR/ NHCC/ Quality Control Team with timely and accurate Quality Control reports.
- Interface with COTR on new or revised SOP/SOI and update the Quality Control Master Plan accordingly.
- Provide Task Supervisors with feedback on performance.
- Review weekly reports prior to distribution.

The Government will review Monthly Progress Reports and will attend regular task performance review meetings with the Contractor to survey quality of products and services.

13.0 Definitions:

DBSS: The "Defense Blood Standard Systems" is used by the Naval Health Clinic Charleston laboratory personnel in support of providers for quick, accurate and reliable results for blood drawn for testing.

AHLTA: "Armed Forces Health Longitudinal Technology Application" is the primary medical software for patient care. AHLTA is an Electronic Medical Record (EMR) application that has been deployed worldwide by the Department of Defense as the main medical system for patient care. Naval Health Clinic Charleston is the host for the Charleston area.

CHCS: The "Composite Health Care System" is the mainframe datacenter for patient encounter storage. Support is provided for all CHCS hardware including laboratory instruments, network terminals and network printers.

SAMS: SAMS is the "Snap Automated Medical System" application used by the Staff Records office to keep track of the medical readiness of the Command Staff. Hardware/software support is provided for users by the Command IMD and the SAMS Norfolk Fleet Center.

TPOCS: TPOCS is the "Third Party Outpatients Collection System" application/database used by the Third Party Collection department to bill outside insurance companies for the care and medicine that are provided to the companies' insured members. Hardware and software support are provided by the Blade Operations Center (BOC)
and the Command IMD.

DOEHRS NHC): "Defense Occupational and Environmental Health Readiness System – Hearing Conservation" is used by Naval Health Clinic Charleston Occupational Health Department personnel in support of people in need of hearing tests.

DICTAPHONE: Dictaphone provides online dictation to CHCS from recorded PDA and telephonic notes. Support of the users includes setting up Portable Dictation Devices for providers, setting up dictation phone network, user account creation, remotely monitoring printer errors at remote locations, password maintenance, and access issues. Hardware support is provided as necessary.

SLDCADA: The Standard Labor Data Collection and Distribution Application (SLDCADA) is a Naval Sea Systems Command (NASSEA) developed Time and Attendance System that has been chosen as the Department of the Navy standard. SLDCADA is a web-based timekeeping system that allows for centralized or distributed input, and provides the capability to track civilian, military, and contractor hours against job order numbers and type hour codes for financial and pay purposes.

CCE: CCE is the "Coding Compliance Editor" application used by the medical coders at the Command to assist the provider staff in proper coding. Support is provided for the users, hardware and administration of CCE.

ScriptPro: This is the software and hardware solution used in the pharmacy to perform automatic refills and labels for prescriptions. The Pharmacy 2000 software interfaces with cells in the pharmacy. Label printers are interfaced with the system. Support of the application and hardware includes multiple workstations in the pharmacy and one server in our computer room. NHC Charleston installed the network infrastructure and assisted in the initial deployment of the application. NHC Charleston maintains the backups and perform all troubleshooting steps prior to service call placement to the vendor.

ERAS: Enterprise Remote Access Solution is the application/hardware which allows employees and contractors use of enterprise telework technologies to perform work from external locations. Most teleworkers use remote access technologies to interface with an organization's non-public computing resources. The nature of telework and remote access technologies—permitting access

to protected resources from external networks and often external hosts as well—generally places them at higher risk than similar technologies only accessed from inside the organization, as well as increasing the risk to the internal resources made available to teleworkers through remote access. All the components of telework and remote access solutions, including client devices, remote access servers, and internal resources accessed through remote access.

AUDIOCARE: Audiocare is a phone menu driven system that provides Naval Health Clinic Charleston with the following services to beneficiaries: AudioCare Rx Refill, AudioCare On-line Rx Refill, AudioCare Appointment Reminder, and AudioCare Automatic Recall. AudioCare Rx Refill allows beneficiaries to call in and request their refill prescriptions telephonically. AudioCare On-line Rx Refill allows beneficiaries to access the system via the internet to request their refill prescriptions. AudioCare Appointment Reminder will call patients and remind them of upcoming scheduled appointments, with Clinic Location, Clinic Name, Provider Name and time of appointment. AudioCare Automatic Recall, upon request, initiates different types of clinic recalls for personnel.

REES: REES System provides Naval Health Clinic Charleston with constant monitoring of all refrigerator and freezers that contain medication, blood and immunizations vials.

DMHRSi: Defense Medical Human Resources System-Internet is the first Military Health System (MHS) application that provides comprehensive and integrated human resources functionalities. It is an Oracle program designed to manage all human resources-military, civilian, volunteer, contractor, assigned or borrowed labor. It standardizes the capture and measurement of human resources into a workable format.

MIAP/STARS: MIAP (Multi-host Internet Access Portal) is a web-based Java applet (WRQ's Reflection for the Web) that provides terminal and printer emulators for logging into, and printing from STARS (Standard Accounting and Reporting System). MIAP provides a "links page" with links for the terminal and printer sessions that must be clicked on to start up the desired STARS sessions. Users also must log in to MIAP, though users with common access card (CAC) enabled PCs will be able to provide their PIN to log i n. If the CAC fails or there are communication issues, the user will be prompted to enter their MIAP user ID and password.
