SOURCES SOUGHT SYNOPSIS / REQUEST FOR INFORMATION

Depot Maintenance Applications Consolidation (DMAC)
(FA8770-26-R-B008)
10 Aug 2026

THIS IS A REQUEST FOR INFORMATION ONLY

This Request For Information (RFI) is issued solely for market research purposes. It does not constitute a Request for Proposal (RFP) or a promise to issue an RFP in the future. This request for information does not commit the Government to contract for any supply or service whatsoever. Further, the Air Force (AF) is not seeking proposals nor will it accept unsolicited proposals at this time.

Respondents are advised that the United States Government will not pay for any information or administrative costs incurred in response to this RFI. All costs associated with responding to this RFI will be solely at the interested party's expense. Not responding to this RFI does not preclude participation in any future RFP, if any is issued. It is the responsibility of the potential offerors to monitor these sites for additional information pertaining to this requirement.

The Government is seeking responses from Small Business Administration (SBA) 8(a) Business Development Program (BDP) vendors registered under North American Industry Classification System (NAICS) **541511 – Custom Computer Programming Services** only.

1. BACKGROUND AND DESCRIPTION

The Business and Enterprise Systems (BES) directorate, through the Air Force Life Cycle Management Center, Logistics Maintenance and Installation Systems Portfolio (AFLCMC/GBM) Depot Maintenance Workflow Product Line, located at Wright-Patterson Air Force Base (WPAFB), Ohio, is conducting market research to seek qualified SBA 8(a) vendors under NAICS code 541511.

The Government is researching SBA 8(a) vendors capable of providing support and maintenance for the Depot Maintenance Applications Consolidation (DMAC) 3 acquisition, which is consolidated sustainment services for the systems identified in sections 1.1, 1.2, and 1.3 of this RFI. This requirement is within the SBA 8(a) program and interested parties must be a part of the SBA 8(a) program to be included in the market research report as an eligible response.

The DMAC 3 Program Management Office requests interested vendors provide responses to exhibit the skills and experiences necessary to accomplish the requirements described. The scope of this effort shall include planning, developing, testing, deploying, and sustaining depot maintenance Information Technology (IT) systems to include new development, modifications, enhancements, and upgrades. This RFI does not represent the exact requirements that will be provided with any future official Request for Proposal (RFP), but is considered similar scope to the anticipated requirement.

The scope of this contract involves barebones sustainment and sunsetting the designated applications and databases, with the understanding that the overall scope may be progressively reduced throughout the Period of Performance (PoP) as systems are systematically decommissioned.

1.1.Depot Maintenance Systems Integration (DMSI) DAJEDI Applications

The DMSI applications were modernized, technically refreshed, and re-hosted into a consolidated system framework. DMSI supports approximately 8,000 Headquarters Air Force Materiel Command (HQ AFMC) users at the three (3) Air Logistics Complexes (ALCs) and Kadena Air Base (AB), including inventory management specialists, maintenance specialists, equipment specialists, funds monitors, and quality assurance specialists.

Five (5) DMSI DAJEDI applications are within scope of this RFI:

1. AFMC Labor Standards Data System (ALSDS): Establishes and maintains labor standards for maintenance planning and production costing. It provides information on data used for capacity planning reports that shall evaluate workload and personnel in terms of skills, and a simulation capability in order to determine the impact on skill capabilities and requirements in relation to workload changes.

2. Job Order Production Master System (JOPMS): Provides a repository for storing the production number master records. It also provides the user ability to track customer work

requests, record work authorizations, maintain temporary work plans, record end item production, and document standard labor hours earned during depot level maintenance.

3. Depot Maintenance Materiel Support System (DMMSS): Acts as a repository for material standards and production/issue history, which supports increased productivity of the Depot Maintenance Work Centers. It provides part number to stock number cross-reference, history of National Stock Number changes, and retrieves, stores and updates Bill of Material (BOM) standard data.

4. Exchangeables Production System (EPS): Provides access to workload requirements data, end item availability data, job order number data, production count data, end item production data, on-line information used to manage Depot Maintenance Supply Centers (DMSC) and bench stocks.

5. Inventory Tracking System (ITS): Tracks repairable end items through the maintenance overhaul line. It assigns item-tracking numbers to all parts as they are inducted and subsequently tracks them through disassembly, repair, and assembly. The system provides management information to all levels of management as well as inventory control.

1.2.Depot Maintenance Consolidated Operational Database (DMCODB)

DMCODB is an integrated, consolidated shared Oracle database that provides data for the production management of the depot repair and maintenance process for the AF enterprise. It is an operational-level data environment, serving on-line transaction processing applications for managing day-to-day operations in the AF aircraft maintenance depots. Utilizing the DMCODB's consolidated data, the DMSI systems enable users to perform analyses, create reports, and respond to information requests from AFMC command-level staff, HQ AF staff, and Department of Defense (DoD) elements. DMCODB also provides data for similar purposes to the BLADE, local depot data marts / warehouses, and Enterprise Integration projects.

1.3.Depot Maintenance Legacy Systems (DMLS)

DMLS consists of two (2) applications used by all three (3) ALCs to perform management of maintenance, repair, and overhaul activities, workload forecasting, planning, parts support and tracking and requirements, configuration and workload management. DMLS includes the following systems:

1. Depot Maintenance Workload Planning and Control System (DMWPCS): Provides the depot maintenance a method to document and track the results of workload and manpower planning actions, provide a planned and historical labor application, interface data to other systems and provide a master listing of all Resource Control Centers (RCC) and their associated accepted workloads factor. The system also provides for multiple Planned Labor Application (PLA) capability. This system is designed to process in both batch and database environments.

2. Information System Management Tool (ISMT): A cloud-hosted portfolio management system, ISMT implements requirements and workload management tracking/reporting tool that supports the entire software lifecycle for Logistics Business IT (LogIT) programs/systems. ISMT is also used to manage the program backlog of tasks that need to be worked within a program release or sustainment cycle.

2. Technical Capability Requirements

Companies interested in responding to this RFI should provide the following information and/or documentation that describes technical capability in the 13 areas listed within this section (pages 4 and 5). Seven areas are considered critical for achieving successful technical performance. Include in the description/ documentation for each area below whether your company performed as a prime or as a subcontractor; and provide if personnel have at least three years of relevant and recent experience.

1. (CRITICAL) Describe previous experience supporting systems and related business processes which will operate within the AF and DoD computing environment.

2. (CRITICAL) Describe previous experience working and interacting with the Defense Information Systems Agency (DISA) as a service provider supporting infrastructure and multiple application environments (development, testing, and production).

3. (CRITICAL) Describe previous experience with transitional startup of software maintenance and support activities for applications or systems that were previously designed, implemented, and supported by another vendor.
4. (CRITICAL) Describe previous experience applying Agile software framework methodologies to requirements investigation, analysis, planning, development, and deployment for IT systems within DoD computing environments.
5. (CRITICAL) Describe previous experience providing software development, sustainment, maintenance and surveillance activities required within an integrated environment throughout the enterprise.
6. (CRITICAL) Describe all experience supporting the knowledge and skill areas identified for each system in section 3.1, 3.2, and 3.3 of this RFI.

7. (CRITICAL) Describe experience providing on-site and remote operational system, application, and database administration within an AF computing environment.

8. List relevant Government and/or commercial contracts performed recently and include the following information:
    (1) Contract number and description of services.
    (2) Contracting officers' name, address, and telephone number.
    (3) Program managers', project leads', and/or technical leads' name, address, telephone number and a list of tasks performed for these personnel.

9. Describe experience conducting software/system development and qualification testing (including transitions and startups) in accordance with Air Force (DAF) Acquisition Process Model (APM) and Agile Framework software development methods.

10. Describe experience creating, preparing and updating software system documentation and artifacts in support of IT systems within AFMC or AFLCMC.

11. Describe management experience and ability to provide additional services/capability in the event of an immediate surge requirement.

12. Describe your experience building, equipping, staffing, and managing a secure software development facility/environment for application software development and testing for promotion to a US Government Prod host environment. Please include your experience with compatibility of the development, test environment, and production environments for code promotion and seamless integration.

13. Describe your experience sunsetting and systematically decommissioning AF applications and databases. Please describe project and personnel management strategies you would utilize for an effective decommission.

3. Architectural, Engineering Processes, Technical Skill Sets

3.1. DMSI DAJEDI Application Support Skills and Knowledge

ALSDS, DMMSS, EPS, ITS and JOPMS applications are using web application architecture with software.

- Oracle PL/SQL (database business transaction code)
- Oracle SQL Script
- PHP (application front end server code)
- Javascript
- HTML (Hyper Text Markup Language)
- CSS (Cascading Style Sheets)
- RoboHelp (Application Help Files)
- Jira/Confluence/Zephyr
- Git/Bit Bucket
- ISMT (Information System Management Tool

3.2. DMCODB Support Skills and Knowledge

- Oracle 19.x DB administration and performance tuning
- Oracle SQL/Net
- Oracle SQL Script
- Oracle Wallet
- Oracle GoldenGate, Materialized Views
- Languages:
    - Oracle PL/SQL
- Information System Management Tool (ISMT)
- IBM Websphere MQ
- SFTP
- UNIX/Linux shell scripting and system administration
- MS Windows Sever Administration
- Jira/Confluence/Zephyr
- Git/Bit Bucket

- Perl
- PHP
- Extensible Markup Language (XML)
- Java

- Data Modeling and Data Management
  - Oracle Data Modeler

3.3. Depot Maintenance Legacy Systems (DMLS)

A. DMWPCS is programmed in COBOL and resides on an IBM mainframe computer hosted by the DISA at Hill AFB, UT.

- Mainframe: Microsoft Azure C1
- OS - Windows Servers 2016
- DB - Azure SQL Server
- C#
- Approx. 142,530 lines of code

B. ISMT is a cloud-based configuration and requirements management tracking and workload management system.

- Cloud Azure PaaS
- BitBucket Artifactory
- DB: SQL Server 2018
- Visual Studio 2019
- Oracle PL/SQL
- Web Framework: ASP.net
- Approx. 855,000 lines of code
- Repository: Atlassian BitBucket (Git)

4. Personnel Security Investigation (PSI) Requirements for Information Technology (IT) Level Positions

Contractor personnel shall be required to have the appropriate level of investigation and security clearance (up to and including SECRET) during the performance of duties in support of this contract. All contractor personnel are to have a completed favorable National Agency Check with Written Inquiries (NACI). The contractor personnel shall be required to obtain Common Access Cards (CACs) for the purpose of entering a Government installation and also encryption and physical and digital identification for logical and physical access to Government data. The contractor shall be required to obtain a CAC before start of work. The contractor shall not involve any foreign nationals in work to be performed under this requirement.

5. Capabilities Package

Vendor submittal shall include a cover letter and a capabilities statement addressing the Technical Capability Requirements. The capability responses should be *no more than 10 pages* in 12-point Times New Roman font, single spaced, with one (1)-inch margins in Microsoft Word or PDF format. Page size shall be 8.5 x 11 inches; foldouts are permitted but will be assessed towards total page count.

The cover letter should include the following information:

- Business information for your company and for any teaming or joint venture partners:
  - Company Name
  - Address
  - Point of Contact (POC) information including name, phone number, and email address
  - CAGE Code/DUNS Number
  - Web Page URL

- Company's Small Business size and 8(a) program graduation date, if applicable. *Please refer to Federal Acquisition Regulation (FAR) 19 for additional detailed information on Small Business size standards. .*

- An acknowledgement of your registration for NAICS code 541511

- Based on the above NAICS Code, state whether your company is certified as:
  - Small Business 8(a) (yes or no)
  - Alaskan Native 8(a) (yes or no)
  - Native American 8(a) (yes or no)

- Available contract vehicles (Federal/DoD/General Service Administration) with which your company is currently aligned

- A statement as to whether your company is domestically or foreign owned (if foreign owned, please indicate the country of ownership)

- Provide a statement on interest/likelihood of response to a formal RFP for the DMAC 3 contract initiative.

- Where appropriate, identify whether your company would propose teaming arrangements to address the broad technical challenges of managing consolidated contracts.

6. Responses

Interested and eligible SBA 8(a) vendors under NAICS Code **541511** are requested to submit their Capabilities Packages *in Microsoft Word or PDF format* **no later than 4:00 p.m. Eastern Standard Time (EST) on Friday, 24 August 2026**. All submissions are via *email only* to Contracting Officer Eric Lagasse (Eric.Lagasse@us.af.mil). *The Government will not entertain telephone calls for this RFI. Related questions shall be emailed to the Contracting Officer.*

7. Period of Performance

The Period of Performance is projected to be one (1) 12 month base with eight (8) six (6) month options and one (1) six (6)-month option for a total of one (5) years and six (6) months and is anticipated to begin no later than 1 August 2028.

8. Contract Type

The contract type will be Firm Fixed Price (FFP). FFP Contract Line Item Numbers (CLINs) for labor and Cost Reimbursable (CR) CLINs for travel and Other Direct Costs (ODCs) are anticipated.

9. Summary

This is a Request for Information only. This does not constitute an RFP. The submissions will be used in completed market research. The information provided within is subject to change and does not commit the Government. The AF has not made a commitment to procure any of the items discussed, and release of this RFI should not be construed as such a commitment or as authorization to incur costs for which reimbursement would be required or sought. All submissions become Government property and will not be returned.
